

# Video Alarm Services

## DATA SHEET

A Modern Solution for Effective & Enhanced Physical Security  
New Era Technology offers an effective video alarm solution that helps improve the safety of your people and facilities by leveraging your existing video surveillance system. Fueled by AI technology, this service allows you to improve security and responsiveness thanks to the capabilities of the feature-rich video alarm system combined with real-time visual verification.

### Powered with AI Technology

New Era Technology's video alarm offering leverages AI-powered analytics and is combined with proper network design to improve Physical Security for your organization.

### Reduce False Alarms with Real-Time Visual Verification

Compared to traditional intrusion alarms, New Era's Video Alarm Service turns your existing video surveillance system into a proactive video alarm solution. New Era's Video Alarm Offering includes sirens, strobes, IP speakers, pre-recorded messages, live talk-down capability and 24x7 monitoring by our Video Monitoring Center, all with encrypted notifications and alarm transmissions. This service creates a comprehensive solution for your business by including visual and audible alerts, while providing proactive monitoring for real-time detection and response. When a critical event occurs, an alert is immediately sent to the Video Monitoring Center to view the protected location. Providing our Video Monitoring Center instant access to see and respond to an alarm is the difference between apprehending a criminal and just reviewing footage of the crime the next day.

## At-a-Glance Benefits

- Reduces ongoing operating expenses
- Mobile App Management
- Reduces false alarms
- Proactive monitoring
- Visual situational awareness via real-time visual response
